AI *Telephone*

a game of telephone where every player is a model

Nick "shifty" Underwood

every meetup group chat, ever.

tokens	13,702
cost	\$0.00

● ● ● ~/Work/ai-telephone - opencode

opencode

Build · nemotron-3-ultra-free OpenCode Zen

build a telephone game where every player is a model

- ✓ read 14 files
- ✓ planned: photo → describe → draw → ... → video
- ✓ wrote server/runner.ts, shared/types.ts
- ✓ tests: 172 passing

tokens 182,497

cost \$0.00

FREE

Two roads to a *\$0* build

01

Free cloud models

OpenCode Zen ships free models: **no key, no card.**

This laptop: 0 credentials configured, 7 free models, and they answer.

02

Run it locally

Qwen3.5 9B on this laptop's GPU: **\$0 per call**, and nothing leaves the room.

It's a player in tonight's game.

Restore Thread Progress Status

main

Settled (143)

The fix keeps the first and final assistant messages visible on web and mobile. Tool work and middle narration remain folded.

Validation passed:

- 51 focused tests
- Web and mobile typechecks
- Targeted lint and formatting
- Exact issue reproduction
- CI checks

The PR is real, mergeable, and CI is queued.

> 2 changed files +29 -12 Show files

Open diff

Got things to fix. CI broke. Got these comments from another agent:

Yes — it fixes the reported bug, and the implementation is sound.
I ran both touched test files on the PR head (bd54c0d, based on current main tip): 51/51 pass.

What it does: keeps the first and terminal assistant messages of a
